

Hydraulic Breakers with Accessories

SC Series: SC6, SC8, 12, 16, 22, 28, 36, 42

For skid-steers & mini-excavators up to 26,450 lbs

Tramac's new light breakers, the SC Series, are also buckets and compactors! One excavator, one operator, simple on and off—and the job's done.

This new breaker revolutionizes the entire work process. The SC series is designed so the breaker can quickly accept either a bucket or a compaction plate with an easy "quick'tach" system. Break material, remove debris then tamp the surface: one operator with one excavator can finish the entire job.

- **Patented steel ring system**
 - the steel ring locks the tool retainer and the bushing and protects the greasing system
 - use the multiple-use tool to remove the ring, releasing the sliding bushing and the tool instantly
- **Redesigned, highly simplified interior mechanics for fast, easy maintenance to keep costs down**
 - no tie rods; single retaining pin
 - few moving parts and extremely easy, quick disassembly

- **Powerful and designed for durability**
 - large-diameter, reinforced tool
 - sealed energy chamber with diaphragm: constant pressure, virtually maintenance free
 - upper and lower shock absorbers for very low vibration levels
- **Patented Auto+Optipower automatic pressure regulator valve and energy recovery valve**
 - working pressure and work capacity are maximized and kept constant, regardless of flow variation, back pressure or oil temperature
 - recycled, controlled rebound energy provides 30-40% additional power
 - breaker is protected from "overflow" damage
 - excavator's hydraulic circuit is protected
- **Cylindrical ergonomic shape slides into tight places, gives better heat and noise control**
 - a tool of choice for trenching and other confined-space work
 - striking assembly is suspended within cylindrical housing, not in contact with it, so noise and potential for overheating are greatly reduced
- **No extra hydraulic lines needed when connecting the Bucket or Compactor accessories**
 - compactor operates from breaker's cycling
 - bucket designed to match bottom of housing perfectly; attaches mechanically with a simple multiple-use tool (included)

SC Series Hydraulic Breakers - SC6, 8, 12, 16, 22, 28, 36, 42

For mounting on excavators at weight range limits (upper and lower), please contact Tramac. TRAMAC reserves the right to change or discontinue models and/or specifications without prior notice.

Quality and dependability: two features you can count on with every TRAMAC product.

All TRAMAC products are engineered for superior performance, manufactured to the most exacting specifications, and—within the guidelines of the industry's most rigid quality control program—thoroughly inspected at every stage of production. All working parts are precision-machined to the closest tolerances, and all materials meet or exceed the highest industry standards. These are but a few of the many vital reasons major contractors worldwide choose our products.

They know that with TRAMAC, reliability is crucial; a basic component conscientiously built into every unit that bears our name.
